UNITED STATES DEPARTMENT of ENERGY  
YUCCA MOUNTAIN PROJECT;  
CAROL HANLON,

Monday, September 24, 2001

SEP 24 2001

Last Sunday's Review Journal gave us this "last chance" information about our pros and cons on the storing of spent rods of the nuclear wastes from all parts of our Great Nation.

Last Tuesday, the 18th, I wrote to both our senators to "remind them both about our nuclear waste problem facing us Nevadans." Of course, I made sure of the fact that the evil of the recent horrendous attack on New York City by the cowardly terrorists is certainly the number one emergency for now, and at how I marveled at the "togetherness" of bi-partizanship that followed.

Now, if we could just get that kind of bi-partizanship toward our views on this nuclear storage project, maybe we could soundly defeat the U. S. Government's aim to store it here in Nevada.

Included in this letter is a copy of my letter to Our Great Senator Harry Reid dated last May. The reason I am sending it to you is that it explains in great detail about my Wife and I and our opinions on this Very Important Nuclear Waste Matter.

It goes on to explain in detail the included copies about my hometown problem of thirty years ago, and how it "sort of" resembles our problem of today here in Nevada. I received an answer from Senator Reid the following May 30th, but I was not happy with his form letter explaining what was accomplished up to that point. I respect that answer, as I know how busy the Nevada Senators are on every other matters of great concern.

But I wasn't entirely satisfied with his answer, as (I realize) how hard it must be to personally give an answer, and the fact that the information I sent him was a 30 years ago incident. The fact remains that even back then the feelings ran high about the safety of such a storage.

I am "no scientist," but it gives me a great feeling that to be so rebellious about this cannot be "all wrong," as I had and still have so much faith in my Father's judgement.

Carol, I just don't know if this information could be of use for you in my Wife's and my resentment to this Government Plan, but if it is, SO BE IT! As an "after-thought," even the evil terrorists may have a way to take advantage of it, like maybe putting the mode of transporting it into a disastrous "accident!"

RESPECTFULLY,

*Edward & Louise Fay*

THE HONORABLE HARRY REID,

TUESDAY, MAY 15, 2001

Hello, Harry! My name is Eddie Fay from Las Vegas. I have been a Nevada resident for 40 years since Christmas week with my Wife of forty five years. I hired on with Trans World Airlines McCarran Field retiring with 31 years in April of 1992.

My Wife Louise and I were born and raised in the State of Kansas. The enclosed three page copies illustrate, in my opinion, the exact on-going problems of today in Nevada, as to how my hometown of Lyons, Kansas coped and fought the U. S. Government and the High Powered Scientist off and "won." Like today, the General Opinion "Whatever the scientists say is good enough for me," as as quoted by our "legalized" U. S. President "W." Bush. If you notice, the chosen spot for the Nuclear Repository isn't located in the "Great State of Texas!"

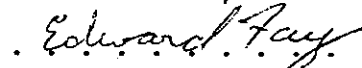

A former Lyons High School Classmate of mine, Carolyn (Jones) Saylor, the Wire Editor, co-owner of the Lyons Daily News, sold their establishment recently and retired. Upon reading about this in my hometown paper, I wrote her about the Yucca Mountain "deal" and if she might send me copies of how they ~~warded off~~ the U. S. Government's plan to utilize the old abandoned salt mine thirty years ago.

I was very surprised that she had found in the files that I had sent this article from the New York Times to my Dad, page One of 3. I had forgotten about it, but it fits exactly with today's problem. As noted in the upper right hand corner of that page is her hand writing at the time, "Eddie Fay sent this clipping to his Father, Frank Fay of Lyons dated 1971." My Dad passed away the following year 1972 from a stroke. Pages two of 3 and Three of 3 explains in great detail the "carbon copy" of today's Nuclear Waste Disposal problem.

This again proves how "devious" the government can be with full disregard for Human Lives and/or Property. As you may notice, the " frosting-on-the-cake" (safe) way of ridding theis dangerous product, I have highlighted the bad effects of that time. But, of course, that does NOT include the Chernoble incident in Russia, nor the "Three-Mile-Island" happening right here in the USA.

Indeed, we have a problem; How can we dispose of this Hot Stuff? The old fashion idea of "burying it in Mother Nature's Earth is NOT the answer. It seem's the High Powered Scientists of Today could develope some way of disposing this waste Safely and sanely as I certainly do not have the answer. Please feel free to call me if you like on my unlisted phone number 702-458-4148, or reply to me by U. S. Mail if I might help prevent the Yucca Problem.

RESPECTFULLY,

Mr. and Mrs. Edward Fay  
3243 Avondale Court  
Las Vegas, NV 89121-2709
